

COMP262-01

CPU MC Project: a PEP8 CU Micro code implementation PART1(MC1) CODING of the CO/FO generic steps

Continue with the micro coding.

In MC0, we have implemented the generic FI step.

For this part (MC1), we will implement the generic CO/FO steps.

We have provided a 'shell' for the micro code, which includes the RTL as comments.

Complete and verify that the required micro code produces the correct results, which are deterministic.

Deliverables

The completed micro code;

YOU MUST PROVIDE DETAILED comments indicating:

- 1) WHAT parts of the implementation are coded but not working and
- 2) WHAT is left to be coded.
