

Student's Remarks:

```
// Notes: Everything seems to be working... but to be competely honest
// I'm not 100% sure how exactly to check to be sure
// Would it be possible for us to get a sample output in the future?
//
```

```
//On run displays error "Failed unit test". This problem may be occuring because
//the values of A and B are not set properly for grapping the HO and LO byte.
//
```

```
// ***** I am not sure if I used the proper Lo and Hi order bytes for the 2nd and 3rd part;
//Still trying to learn the functions of Pep/8 CPU
```

```
//I am totally lost on how to do this, I don't own the book and have been reading the stuff thats on
//blackboard but its hard to find things that detail what we are trying to do with these instructions
//exactly. I cant exactly google things either as pep8 isn't widely used.
//I understand what some of these instructions do, but am totally lost on the other ones which I
//have left blank.
```

```
//Comment Task 1: Looks like there are no problems as i ran it. I'm still having a bit of hard time
//understanding this, I had some assistance for this one so i will studying this more to understand.
```
